

Securaplane
System **Lithium**

Discover the chemistry between us.

Don't choose a battery,
choose a health
monitoring capability **Lithium**.

You can trust Securaplane's safe, light, powerful lithium technology because there is more to its design than the right chemistry.

As lithium pioneers, we have been able to select the optimal chemistry, of course.

More important than this, we have created a system, not just a battery.

Securaplane's System Lithium is a set of very small, low-output smartphone-type cells wrapped in a sophisticated monitoring and health management package.

That's why it's as safe as conventional aircraft batteries, yet lighter and more powerful by far.

Securaplane System Lithium has been selected by a major business jet manufacturer and helicopter maker for safety and the balance of power versus weight.

It was the first choice for a major military jet programme, where power hungry, mission-critical systems meant that nothing less than the right lithium technology would do.

Securaplane System Lithium.
Taking the lead, with leading players.
